

Lecture 3: Writing Control Structures (PL/SQL)

1. Control Structures: Control the flow of execution in PL/SQL programs. Types: Conditional, Loop, Sequential.

2. IF Statement: Executes code based on condition.

Example: IF salary > 5000 THEN DBMS_OUTPUT.PUT_LINE('High'); END IF;

IF-ELSE: Adds alternative path.

Example: IF marks >= 50 THEN 'Pass' ELSE 'Fail' END IF;

IF-ELSIF: Multiple conditions.

CASE Statement: Cleaner multiple condition handling.

3. Loops: Repeat execution.

Basic LOOP, WHILE LOOP, FOR LOOP

Example FOR LOOP: FOR i IN 1..5 LOOP DBMS_OUTPUT.PUT_LINE(i); END LOOP;

4. Loop Control: EXIT and CONTINUE

5. Sequential Control: GOTO, NULL (rarely used)
